DETAILED ACTION

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Neudorfl et al employ Teflon filter for collecting cocaine vapor, and use of heat and vacuum to draw the collected material from the filter to an analyzer. However, the filter is not described as not permitting for bulk flow of "liquids" (Applicant's claims 1,20).

Rio et al teach that PTFE provides a filter that is gas permeable and impermeable to liquid (col. 3, lines 60-65).

Danylewych-May et al teach a sampler including: filter that employs suction to traps sample particles, with subsequent heat usage (col. 2, lines 20-30); but does not describe the material of construction of the filter.

Kishima et al teaches (col. 27, lines 20-25) that PTFE filters are liquid repellant in nature.

As to claims 1 and 20, note was made of the "does not permit bulk flow of liquids and solids" limitation with remaining limitations of each of the two claims. Note was made of the arguments on p. 12(top paragraph) and p. 12, lines 4-6 from last.
